JavaScript	Web & Design Skills (HTML5, CSS3)
C#	JAVA
Databases (SQL Server)	

PERSONAL PROJECTS

Hotel Booking App - Backend
- A RESTful API developed in Java with Spring Boot for managing hotel bookings. This backend system supports CRUD operations for users, rooms, and reservations, while integrating with a database for persistent storage. The application also implements security features such as JWT authentication and role-based access control.
- **Technologies:** Java, Spring Boot, SQL, REST API, JWT
- **GitHub Link:** Hotel Booking App - Backend ⬈

Hotel Booking App - Frontend
- **Description:** A web-based frontend interface for the hotel booking application, designed with modern web technologies to provide users a responsive and intuitive interface. Users can browse rooms, make reservations, and view their booking history. The application communicates with the backend via API calls.
- **Technologies:** JavaScript, HTML5, CSS3, React, Axios
- **GitHub Link:** Hotel Booking App - Frontend ⬈

TODO Application
- **Description:** A simple task management application that allows users to create, update, and delete tasks. This project emphasizes functionality like organizing tasks based on priority or deadlines, and may include persistent storage to save task data.
- **Technologies:** JavaScript, HTML5, CSS3, Local Storage
- **GitHub Link:** TODO Application ⬈
